INNOTACT CONSULTING B.V.

InnoTact Consulting BV (1998) is an independent Life Sciences consulting firm. We advise both public and private parties in The Netherlands and abroad.

There is a continual requirement in Life Sciences for acknowledging promising ideas and the realisation thereof.

Our consultants understand the Life Sciences sector and possess thorough knowledge of the market. InnoTact Consulting offers clarity in identifying opportunities for success.

SERVICES

The continual focus in the work of InnoTact is on realising the ambitions of the assigning party in the field of Life Sciences. The InnoTact advisory products in Life Sciences are comprehensive and under continual development. Some products from the current portfolio are:

- Technology-Market study
- Business plan development
- **Programme evaluation**
- Strategy development
- Public-Private partnering
- Biocluster development

SERVICE:

● PROGRAMME EVALUATION

We use evaluations to make realised ambitions perceivable. The assigning party can use the executed evaluation to assess the extent to which the aim of the programme has been achieved. He is given a reply in respect of the form in which the stimulation activities have contributed to this.

We use a tried and tested method for the evaluation. Our knowledge of the Life Sciences field means we effectively recognise the variables that were influential and are in a position to name the corresponding effect. This is based on our understanding of the policy theory which forms the basis for the programme. Our choice of research system is sound and the methodology used is fully geared towards the specific evaluation.

Our independent position means we have access to the relevant parties for the evaluation. InnoTact do much more than merely collating data, InnoTact can also verify this, assess relationships and generate explanations.

And with the sound knowledge of the Life Sciences field, we use our observations for an evaluation suited to the ambitions of the assigning party. We also make recommendations for an appropriate and innovative follow up to the evaluated stimulation programme when required.

InnoTact will also take care of *product* evaluations. They also develop and supervise *process* evaluations. This takes place in cooperation with the involved parties. An example of this is the audit of a scientific programme in cooperation with an 'international peer review committee'.
